DETAILED ACTION

Examiner's Statement

1. Applicants' amendments and arguments, filed on 06/10/2005, with respect to Claims 1, 5-24, and 28-42 have been fully considered. The 35U.S.C.103 rejection has been overcome by rewritten those objected claims – dependent claims in independent form including all of the limitations of the base claim and any intervening claims. Applicant cancels Claims 2-4 and 25-27 and adds new claims 43-46. None of the previously cited reference teaches the amended and new independent Claims 1, 24, 41-43, and 45.

Examiner Amendments

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

3. Authorization for this examiner's amendment was given in a telephone interview with Attorney Steve Mendelsohn on August 26, 2005.

4. The application has been amended as follows:

In the claims:

- In claim 6 line 2, change " $e^{-j\theta[n]}$ " to " $e^{-j\theta[n]}$ ".

Allowable Subject Matter

5. Claims 1, 5-24, and 28-46 are allowed.

6. The following is an examiner's statement of reasons for allowance.

Art Unit: 2634

- The prior art fails to teach an apparatus of Claims 1, 24, 41-43, and 45 that specifically comprises the following:

-- The instant application is deemed to be directed to a non-obvious improvement over the admitted prior art of the instant application and the invention patented in Pat. No. US 5,692,011 and new bussgang method for blind equalization Acoustics, Speech, and Signal Processing, 1997. ICASSP-97, 1997 IEEE International Conference on, Volume: 3, 21-24 April 1997, Pages: 2269 - 2272 vol.3. The improvement comprises that step a) generates the estimate by:

a1) calculating an SA cost function error term-based on the demodulated signal, wherein the single-axis cost function is a single-axis constant modulus criterion J_{CM} ; a2) forming an approximation of a derivative of the demodulated signal with respect to the angle; and a3) combining the SA cost function error term with the approximation to form a phase error; and a4) generating the angle from the phase error; and for step a3) the phase error is the stochastic gradient of the single-axis constant modulus criterion J_{CM} ($dJ_{CM}/d\theta$) given by:

$$dJ_{CM}/d\theta = 4 e_{SA-CM} [n] DT[n],$$

where e_{SA-CM} is the SA cost function error term defined by $(\text{Re}\{y_n(\theta)\}^2 - \rho^2)$ $\text{Re}\{y_n(\theta)\}$, $y_n(\theta)$ is input data based on the demodulated signal, and $DT[n]$ approximates a derivative of the demodulated signal with respect to the angle θ ($d(y_n(\theta))/d\theta$).

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
